

VIP PLASTIC SURGERY

VIP

Dr. Lee Myung Ju MD. PhD.

Founder and Chief Surgeon of VIP Plastic Surgery

Dr. Myung Ju Lee MD. PhD.

Dr. Myung Ju Lee is a prominent board-certified Korean Plastic Surgeon specializing in autologous nose, facial, and body contouring surgeries. He is the founder and director of VIP Plastic Surgery based in Jeju, South Korea.

Dr. Lee is recognized both in his homeland and internationally, as one of the best plastic surgeons today. Ever since he became a plastic surgeon, Dr. Lee has held professorate and faculty positions in various university hospitals and organizations. He has made profound and systematic studies in the areas of autologous nose surgery, facial contouring surgery, High-SMAS facelift, breast surgery, liposuction, and stem cell fat grafting.

VIP PLASTIC SURGERY

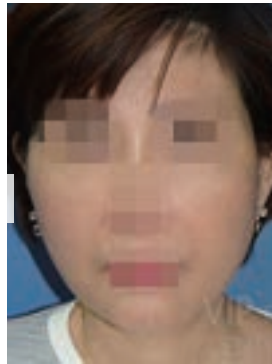

Since 2001, VIP Plastic Surgery in Korea has been the ultimate destination for international clients who are looking for the best plastic surgery tourism. Our clinic offers various ranges from head to toe and non-surgical to surgical treatments. Moreover, an all-inclusive beauty journey such as accommodation, pick-up services, and post-care services are provided during your stay in Korea. With Dr. Lee's extensive experiences, skills, and zero malpractice records, each and every patient is served with quality medical services. We believe in quality over quantity.

Extended Deep Plane Facelift & Stem Cell Fat Grafting

An extended deep plane facelift focuses on directly lifting and re-mobilizing the anterior loosened facial area. This allows direct access to tighten the anterior sagging tissues to relocate the composite layer, thus resulting in the best performance, natural appearance, less swelling, less visible incision line, and long-lasting results. Stem cell fat grafting is an advanced fat grafting surgery that utilizes filtered pure fats and autologous stem cells harvested from your own body. Because of the highly concentrated stem cells, final fat tissues remain longer, yield more volume, and create skin rejuvenation such as skin elasticity and wrinkle improvement.

Rib Cartilage Rhinoplasty

Rib cartilage rhinoplasty is VIP's premium rhinoplasty that uses your own natural rib cartilage to design the nose from the basement to tip fully. Rib cartilage is known to be the best material for revision rhinoplasty for patients with severe short noses due to repeated revision rhinoplasty and infection. Furthermore, rib cartilage rhinoplasty is the best choice to increase the dorsum height, length, and tip projection, creating facial harmony and balance and minimizing infection rates.

Genioplasty & Jaw Reduction

Advanced genioplasty (sliding genioplasty) is a chin surgery where the chin is advanced or moved forward without using artificial implants like silicone or filler. Genioplasty and rhinoplasty combination is commonly recommended for patients who wish to have a side profile harmonization from nose to chin line. Jaw reduction is a facial contouring surgery for patients who wish to achieve a slim and feminine faceline. VIP facial contouring surgeries are permanent.

Eyelid Surgery

At VIP, we tailor eyelid surgery for every patient based on their needs. Patients may choose the height of the double eyelid. Anti-aging eye surgeries are in high demand for both women and men. For patients looking for anti-aging eye surgery, loosened skin and excess fats will be removed and muscles will be strengthened, ultimately providing a comfortable vision and fresher look.

Body Contouring

VIP body contouring focuses on using your own natural fats to reshape your body in a safe and natural way. Liposuction can reduce excess fat tissues in any part of your body. If you wish, we may use those harvested fat tissues to add to the breast or buttock area. Tummy tuck surgery removes excess skin and tightens loosened muscles for a smooth and slim abdomen. Breast surgery can be done in multiple ways - augmentation, reduction, or lift to meet your desired shape.
